

## PRO-FIX SPRAY ADHESIVE

### Description:

- PRO-FIX is an acetone free spray adhesive
- Designed for bonding of dry glass, carbon and aramid fibers for composite structure preparation.
- Can be also used for fixing core materials – foams and balsa – as well as vacuum consumables like peel ply and breather fabric.
- PRO-FIX is only available in 500 ml cans.

### User guide

- Make sure the surfaces which are to be bonded are clean and dry, shake the can well and spray from a distance of 25 cm, hold the can vertically and spray an even layer of adhesive; it must not appear as being wet if it does then move further away from the surface.
- When spraying the adhesive keep a fluid movement with the hand to avoid spraying too much adhesive in one place.
- After each application purge the nozzle by spraying the can upside down.
- To achieving the optimum bond both surfaces must be sprayed with adhesive, wait around 1 minute to allow the solvent to evaporate then press the surfaces together.

### Packaging and storage

Store in temperatures below 50°C and do not expose to direct sun light, flames or source of ignition.

Packaged in boxes of 12 cans and pallets of 50 boxes (600 cans).

For more information please refer to the PRO-FIX MSDS and when handling products of this nature the user must always conform to their company's Health and Safety regulations and guidelines.
